Friday, August 7, 2009

"Doing Business in a Carbon Constrained World"

Location: The Country Cupboard Restaurant
Lewisburg, PA

7:30 am - 9:30 am

Contact Chris Opiela at 570-524-4491 for
more information.

When combined strategically, heating and structure designs can reduce utility costs, decrease a home or business's environmental impact, and provide a more comfortable living or business space to residents and employees. Whether in the planning stages of a new home or business or seeking to retrofit, replace, or fine tune existing systems, this seminar will inform owners and managers of both residential and commercial facilities of state-of-the-art opportunities to heat buildings, conserve energy, and reduce operating costs.

Our speaker, Chris Lehman, will discuss current technologies and alternative heating options, specifically renewable energy applications such as geothermal heat pumps and solar thermal systems. He will also share information on rapidly expanding financial incentives such as loan and grant programs and tax incentives that can reduce capital costs.

A Renewable Systems Integrator and Applications Specialist with Envinity Green Design and Construction, Mr. Lehman has been integrally involved with many local renewable energy projects including solar PV systems, solar water heaters, and geothermal heating systems.

Cost: \$20/person. Space is limited. Registration required.
